SUBMIT URL SHORTEN

Stable

URL Shortening Prompt

Shorten <https://github.com/example/repo> with alias gitrepo

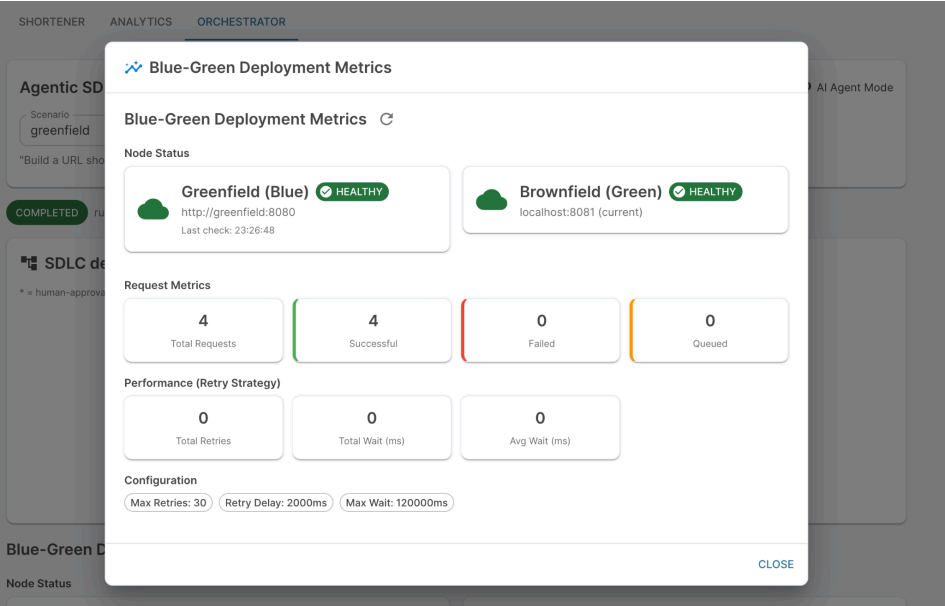

URL Shortening Examples (click to use):

Shorten <https://github.com/example/repo> with ...

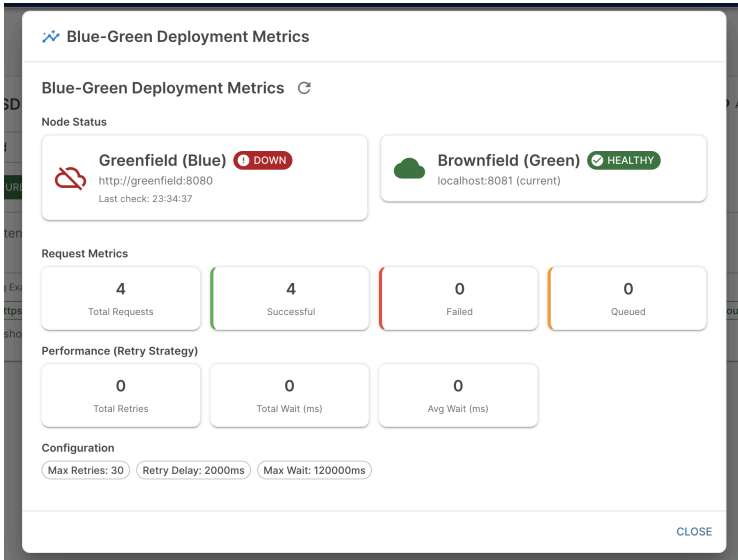

Create a short URL for <https://docs.google.co...>

Shorten https://example.com/campaign?utm_sour...

STEP 2: Check the Metrics to view the Health check.

STEP 3: Intentionally stop the Greenfield node before submitting URL request to check full managed orchestration for resiliency.

STEP 4: Make use of examples and update the URL\Alias\TTL. Submit the prompt while greenfield is down.

CLOSE

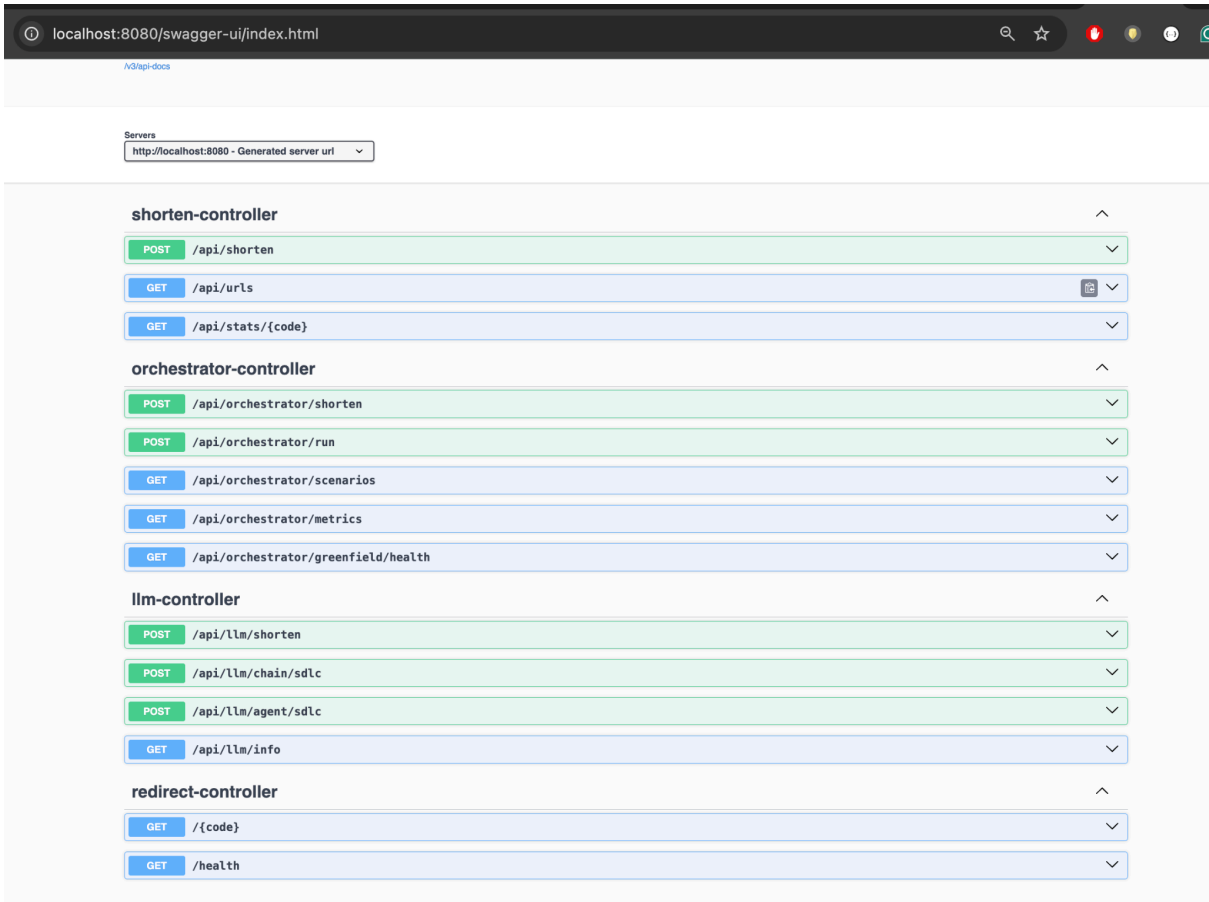

STEP 8: Greenfield node is healthy, and the request got completed after 8 retries.

STEP 9: Fully Autonomous managed request submission without any approvals. (Beta - still in progress)

STEP 10: SWAGGER APIs for the URL services

STEP 11: Fully resilient deployed service in Docker
